Most important things to do in minecraft

Continue

Stop scrolling and start creating something cool! Minecraft earns its reputation as today's greatest sandbox game. So if your kids find themselves bored on a rainy afternoon, there is a world of possibilities awaiting them. In that world of possibilities, we've picked 9 cool, fun things to try in Minecraft. (Tackling the whole universe of the game would be a really, really long blog post). Who knows! Your child might just stumble upon something awesome that could spark a new hobby or even some new coding skills. 9 cool things to do in Minecraft There's no doubt about it: Minecraft is an incredible creative tool. Sure, it's entertaining to play, but the real fun begins when you start to explore its inner workings like a game designer or master programmer. From Java coding with Minecraft to making your very own adventure map complete with customized features, the coolest stuff in Minecraft goes beyond just the surface level of the game. Before you know it, kids will be well on their way to crafting their own gaming experiences and learning how the pros create today's most popular games. 1. Explore Java coding Have your kids ever wanted to create their own custom items? Or do they dream of adding awesome mods to their favorite Minecraft maps? Java holds the keys to unlocking this part of Minecraft. (Wait, what are Minecraft mods?) So, if your kids are ready to level up their game (literally), learning more about Java modding is a surefire way to get there. 2. Go on a multiplayer adventure What better way to ensure a fun time than adding some friends into the mix? From simply playing with friends, siblings, and others under the same roof to connecting with new friends around the world, a multiplayer adventure will double the fun. In fact, playing Minecraft with friends is the perfect way to collaborate on creative masterpieces, go on exciting excursions in adventure mode, or set up a fun social server. 3. Try bow and arrow target practice! Did you know you can craft a bow and arrow in Minecraft? While the process itself requires its own blog post, here is some info to get you started. -Get string by defeating spiders. (Hide in a small space and hit the spider until it dies.) -Get arrows by collecting them from skeletons. -Craft arrows by gathering feathers (from chickens), sticks (from wood planks) and flint (from gravel mining). -Advanced creators can enchant a bow! To use a bow, press and hold right click, and then release to shoot the arrow. To aim, move the mouse around. We recommend doing this in creative mode for unlimited arrows. (In survival mode, kids will either need to enchant their bows with infinity, or simply bring lots of arrows.) And the target? Learn more here. 4. Explore a new game mode We all have favorites, but shaking things up can cast the game in a new light! Love adventure mode? Give hardcore mode a try! Maybe try building something elaborate in creative mode. Here is a comprehensive rundown of Minecraft game modes can help your child select their next adventure in the game. 5. Create custom weapons to fight mobs Why settle for a wooden weapon when you could forge something much cooler? The materials used to create tools can be stone, gold, iron, and diamonds! Here is a breakdown: Wood is the easiest resource to get, but wooden tools also break the fastest. Diamonds are the best material to make tools, but until you find diamonds, look for iron! Gold isn't good for anything with durability—tools, weapons, or armor. And here are 5 mining tips 1. When digging into the ground, first make a staircase so characters don't get stuck. 2. Dig one block in front of the character, drop down, and then dig another block, in front of the character, until they reach the desired depth. 3. Make sure to bring lots of torches! 4. Never dig straight down—just don't do it! If you dig down, characters could fall straight into lava, die, and lose all their items. Also, if you dig straight down, it'll be hard to get back to the surface. 5. Be careful when going into caves! There are lots of enemies in caves, and players will need to practice their combat skills beforehand! 6. Hunt the Ender Dragon Just like in a medieval legend, hunting (and defeating) the elusive Ender Dragon is an epic goal. Advanced Minecraft players will enjoy doing this in survival mode, but those who are less experienced will probably enjoy creative mode better. Either way, this is a worthy goal in the game because so much goes into defeating the Ender Dragon (creating weapons and projectiles, gathering armor, planning out logistics). Plus, you'll want to build an Ender Portal: here's how to do that in Creative mode: 1. In a creative world, use the creative inventory to build an End Portal. 2. Stand in the center and build a 3x3 square of End Portal frames. 3. Then add 12 eyes of ender to the top of each frame. The portal will only work if each eye is facing inward, so make sure to place the eyes correctly. 4. When it is done, the center will turn black and fill with stars. This means it is ready to enter. 7. Create a teleporter with command blocks For more advanced Minecraft aficionados, experimenting with command blocks introduces a whole new level of the game. (For a complete rundown before you dive in, check out our introduction to Minecraft command blocks!) Once you're ready to teleport to a set of coordinates in Minecraft, follow these instructions: In the console command, type: tp @p (This code means that only the player will teleport. For all players to teleport, use @a. You can also use "teleport" instead of tp to make this a little easier to read and remember.) Press F3. (This will put a lot of data on the screen.) To get the coordinates of where the player should land, find the coordinates from "Looking at", in this example: -37 8 -309. Did you know you can also speed up time in Minecraft? 8. Have a building contest with friends Building something cool fun! Playing Minecraft with friends: great! Put those together and double the fun with a building contest. Whether it's recreating Hogwarts, making an amazing pirate ship, or just creating whatever comes to mind in the spur of the moment, a Minecraft building contest makes the sky the limit. How to have a Minecraft building contest with friends Launch Minecraft and open Singleplayer. Click "Create New World" and name the world "Building Contest". Set the Game Mode to "Creative." Set the Difficulty to "Peaceful." Make sure Allow Cheats is "ON." Next, click "More World Options"... and set the World Type to "Superflat." Then, click "Done." Now kids are ready to start building! They'll have 30 minutes (or however long you choose) to build something in their world, for example, they could choose to build: A maze A treehouse A rollercoaster ...or anything else that they can imagine! After the time is up, everyone shares what they've created, showing off their builds to each other and perhaps even voting on a winner! 9. Change the weather For more fun with command blocks, changing the weather is a great one to have in your repertoire. For something new on the horizon (literally), give these a shot. Open the console command, and type the weather you'd like to add to your map. Minecraft weather commands offer the choice of thunder, rain, and clear skies. Kids can also add a time duration to mix things up climate-wise: weather [duration] For instance, weather thunder 200 would mean the weather changes to thunder for 200 seconds, shaking up and adding interesting variety to kids' amazing creations. Next, to flip the weather from the opposite of what it currently is, use toggledownfall. They can also type this in the command prompt with a / in front of it: /toggledownfall. Never settle for "boring" game time Games like Minecraft are meant to spark creativity and fun, after all! So, if your child finds themselves in a Minecraft "slump," it's time to explore different avenues in the gaming world. (Including Minecraft competitions!) And with the right coaching and tools, those avenues can open to include meaningful, project-based learning (plus hours of fun!). iD Tech is on a mission to help transform boredom into an exciting foray into game design, coding, and more! Check out our suite of Minecraft camps, after school programs, and Online Private Lessons to bid that boredom goodbye and kickstart something awesome. Virginia started with iD Tech at the University of Denver in 2015 and has loved every minute since then! A former teacher by trade, she has a master's in education and loves working to embolden the next generation through STEM. Outside the office, you can usually find her reading a good book, struggling on a yoga mat, or exploring the Rocky Mountains. This article needs cleanup to comply with the style guide. [discuss] Please help improve this page. The talk page may contain suggestions.Reason: There are mistakes with the translation from the original tutorial on the Chinese Minecraft Wiki, so you could help by fixing them. While Minecraft is a huge game with endless possibilities, there will always be a time where a player may believe they've done everything, or built everything possible in the game. Here is a list of ideas for players who are bored and may be looking for something fun to do in the game, although most players will have already done many of these. Dig a quarry[] A quarry is a big project, but the rewards are huge. You just dig a big hole down to bedrock and put a chest under it. In hardcore mode, a quarry is a very big push to help you survive. This might be hard to do because you have to make tools and gather wood. Play Hardcore mode[] Most players have played normal survival mode, but hardcore is a much more difficult variant of it. When in hardcore mode, the player is not only restricted to hard difficulty, meaning that mobs deal greater damage, the player can starve to death, and multiple other game features are much more challenging. Furthermore, if the player dies, they can only return to the world in spectator mode, meaning they can never interact with that world again (unless cheats are used). Play Ultra Hardcore mode[] Similar to hardcore mode, this game mode only gives the player one life. However, this game mode also removes the ability to naturally regenerate health, meaning that golden apples and potions and even beacons have to be used to regenerate health. This is a game mode even harder than regular hardcore, which only the best players will be able to complete. So if you are new to the game I don't recommend this mode, but if you are to play this watch your surroundings! Change the rules[] Try changing some rules! Here are some examples:Level system: Rookie (Beginning Level): You can't use tools or crafting. New player (Levels 1-4): You can use only wooden and gold tools, only wood, planks, cobblestone, and dirt. You can't wear armor at the same time. Introduction (Levels 5-8): You can only use wooden and gold tools. Only wood, planks, cobblestone, flower, dirt, coal, and gold can be used. Citizen (Levels 9-12): You can use stone tools or redstone.Knight (Levels 12-15): You can do anything a citizen can do, and use iron tools, and wear iron armor and gold armor. Technician (Levels 16-19): You can do anything a knight can do, and you can create with diamonds and use diamond tools and armor. Mage (Level 20+): You can do what any technician can and create with anything. Nomadic mode[] You cannot build a home. In this case, a "house" is defined as having four walls and a door. Not only that, but you cannot feed animals. You cannot cook food, but you can smelt ore. Likewise, you cannot build or use a bed. For a better game experience, see Tutorials/Nomadic experience. Build an army[] If you're in a server and there's a lot of people there, why not start a war? Build up your own army, feed your warriors, give them arms and armor, and rush to destroy enemies' bases, while defending your own. Build a statue[] Build a giant statue of anything, whether it is in-game or real life, using Minecraft blocks. Examples include an ender dragon, a real-life piano, or the player's in-game skin. If playing in multiplayer, it is recommended to not build with something flammable, to prevent your structure from being torched by griefers. Pixel art[] Main article: Tutorials/Pixel art Similar to statues, pixel art uses dyed wool or other textures to create spectacular 2D mosaics! Find a low resolution image and assign a material to each pixel. The image can then be recreated in Minecraft. Build a roller coaster[] Rails and minecarts can be combined with blocks to create roller coasters. These can have drops, sharp turns, and scenery. Although they are usually built in the Overworld, they can also be built in the Nether, or a portal could even be used to make a roller coaster that travels through both dimensions interchangeably. There are infinite possibilities. See Tutorials/Building a rollercoaster for more info. Nether village[] It's easy in superflat creative mode. It's time-consuming but it's also fun. You can make a village look like The Nether! If you want to build a village that looks like it's in The Nether, you need nether brick, nether brick stairs and fences, glowstone, netherrack, soul sand, a bucket of lava, crimson or warped hyphae, and nether warts. Step 1: Manufacturing farm: use soul sand to replace farmland, lava to replace water, netherwarts to replace crops such as wheat, and nether bricks to replace

2: Build nether buildings: nether bricks or nether crimson hyphae/warped hyphae to replace overworld wood, nether brick stairs to replace ordinary stairs, use nether brick fences instead of glass, the soul sand to replace wood and cobblestone, the ground of indoor use nether bricks. You can also use crimson doors instead of regular wooden doors. Step 3: Step 4: Streetlights: Destroy all street lights in the village and replace them with nether brick fences and glowstone. Step 5: Lava wells: As above. Use Soul sand to replace cobblestone, lava to replace water. Step 6: L - shaped house: The structure is the same, but the roof should be replaced by nether brick and nether brick stairs. Step 7: Blacksmith: The structure is also the same, but chests should fill with nether bricks and items that nether mobs drop. Step 8: Build a large netherrack cube wrapped around the village and add lava, fire, and add caves, to make it look really like in the nether! Create redstone circuits[] Redstone circuits will open up new areas of Minecraft that are both complex and creative. Almost anything can be made from automatic mob traps to machines that can play music or tell you the time. Build something from the real world[] Why not build some real world buildings in Minecraft? Choose some buildings in the real world (example: your home, your school, McDonald's) and build them to the best of your ability. Once created, send the world of these buildings or pictures to your friends. Good luck! Play "Spleef"[] Spleef is an interesting game that can be played on some Minecraft servers. This game is played on top of a lava pool, which has a platform above the lava pool, usually made of snow block, because snow block is destroyed very quickly and cannot be rearranged. Players take the shovel and use them to destroy blocks under other players' feet so they can fall into the lava or defend themselves. Some servers use TNT instead of snow block, and the player holds the flint and steel in his hand and ignites at the TNT under the other player's feet. Play with TNT[] Dig down to bedrock and build a tower of TNT all the way up, with layers of solid blocks in between(due to TNT becoming an entity when lit). Dig a quick hole down the side for access purposes, then light it all the way up! You can blow up a village and harass the villagers. Note: make sure you're not on other's servers, these actions may be considered griefing. Zombies vs. Villagers[] Make sure that you are in creative mode. First, make a 3-block tall, 12×12 box with an open top, and then use spawn eggs to spawn some villagers and zombies. Finally, watch the villagers try to survive. Defeat mobs[] Circle one area, summon 100 creepers, and defeat all the creepers without letting them explode. This will take some time to kill all of them. These will help you in multiplayer, and you can find people who have creative mode, who can use spawn eggs to summon mobs that you want. Summon mobs with commands[] The command /summon can be used to spawn unique and interesting mob types. Examples of what a player could create with the command may be an upside-down spider jockey on top of a skeleton or an enderman with bedrock in its hand and a minecart on its head. Other useful commands used to place or modify blocks automatically are /setblock and /fill. The player could use these to create a giant wall or building without having to manually place everything. Flying Slow Falling Mobs[] Note: This only works properly on Bedrock Edition. Did you know that you can make mobs fly by repeatedly punching them while they have slow falling and regeneration? Probably not! Here is how! Step 1: Type in the command /summon minecraft:pig ~ ~ ~. This will summon a pig. Step 2: Type in the command /effect @e[type=minecraft:pig] slowness 500 100. This will prevent the pig from moving. Step 3: Type in the command /effect @e[type=minecraft:pig] slow_falling 500 3. This will prevent the pig from falling at a normal speed and will instead fall slowly. Step 4: Type in the command /effect @e[type=minecraft:pig] regeneration 500 100. This will make the pig regenerate almost instantly after every punch. Step 5: Type in the command /effect @s speed 500 2. The speed will make you reach the pig. If you don't type in the command, then you wouldn't reach the ground before you would even hit it. Step 6: Begin punching the pig with an empty fist. Once you've started punching, don't stop. After a few hits, you will notice that the pig is in mid-air while you keep punching it to constantly be in that state, looking like it's flying. How long can you keep hitting until the pig touches the ground? Alternatively, if you prefer to do something simpler, you could go to build limit, perform step 3, equip a saddle on the pig, and try to make it 'fly' by using a carrot on a stick. Attack a village[] If you live not far from a village, why not try to attack it? Blow up the houses, lock up the villagers and take over the whole village. If you play singleplayer, though, watch out for the iron golems. Abuse some mobs[] This is best done in the superflat map creative mode. Fence an area, summon a bunch of mobs (don't summon flying mobs or mobs that are immune to fall damage) with spawn eggs, equip a fishing rod and fly as high as you want, but don't fly more than 34 blocks off the ground, and then start fishing for these mobs. If the fishing rod hooks a mob, "release" it and make it fly. You could also organize a race with your friends to see who is the best. You could dig a hole in the ground and pour lava into it and build a tower out of spider webs. Summon a bunch of mobs from the top of the tower (again don't summon mobs that can fly, mobs that are immune to fall damage, or spiders, as all can manage out of the cobwebs) and watch them fall into the lava! You could also build a small ring rail with powered rails, put in some minecarts and load them with mobs, and get them moving at high speed. Finally, place the block one block high from the rail. You could also dig a hole at least 3 blocks deep (1x1), summon a bunch of mobs in the hole with a spawn egg, and then put sand or gravel in the hole, watch them suffocate to death! You could also build a completely enclosed room (with a roof that is closed and dark), fill it with villagers, then put zombies in and watch them get killed. It wouldn't be so nice though... Make an overpowered item[] Note: It only works on Java Edition. With commands, the player can obtain a diamond sword enchanted with an enchantment level 32767. Try it on and go kill some boss mobs. Command for an overpowered Diamond Sword: /give @s diamond_sword{display:{Name:"\"OP sword!\""},Enchantments:[{id:sharpness,lvl:32767},{id:knockback,lvl:10},{id:fire_aspect,lvl:32767},{id:looting,lvl:10},{id:sweeping,lvl:32767},{id:mending,lvl:32767}]} With commands, it's possible to obtain a overpowered stick that knockback entities so far back. Try and beat the game with it! Command for Knockback Stick (and other enchantments) /give @s stick{display:{Name:"\"Knockback Stick\""},Enchantments:[{id:sharpness,lvl:1000},{id:fire_aspect,lvl:10},{id:knockback,lvl:1000},{id:looting,lvl:1000}]} Try to play older versions[] Note: this only works on Java Edition. In order to do this, open the launcher and select an older version that you would like to play. There are a lot of older versions of Minecraft you can play. Here are some versions you could try: Pre-Classic consists of the earliest versions of Minecraft. They are nice and simple, and closely resemble the original "Cave Game" demo. Classic Indev and Infdev The first version of Minecraft that you have ever played, to give yourself nostalgia. The April Fools' versions, such as Java Edition 2.0 and Java Edition 20w14∞. See the next section for some ideas. April Fools versions[] Note: It only works on Java Edition. 2.0, 15w14a, 1.RV-Pre1, 3D Shareware v1.34, 20w14∞, and 22w13oneBlockAtATime are Minecraft versions that were created solely for April Fools' Day, containing multiple jokes unique to these versions. Features in 2.0 include silverfish made from redstone (called "redstone bugs" in-game), the pink friendly wither, extinguished torches, and "Etho Slabs," which are essentially slabs of TNT. In 15w14a, the player is unable to directly attack entities, obsidian boats will sink and drown the player, and like in 2.0, the pink wither is present. Features present in 3D shareware include barrels with overpowered items, cheat codes, and various 90s gaming references. 20w14∞ is a version with over two billion dimensions, including several Easter egg dimensions. These April Fools versions can create a fun and interesting experience for players. Join server[] Although some servers require online registration, others can be joined at any time without any prerequisites. Numerous activities can be done in servers, such as showing your work to others (buildings, skills, etc.), viewing other people's work, and making friends with the players in the server or just having fun on all types of minigames that servers offer. Play a custom map[] Custom maps can be found, and many have a creative storyline, challenging battles, and beautiful buildings. Map time can range from 15 minutes to 100 hours! For those who like to take risks, there are plenty of adventure maps for you to manipulate heroes and fight with countless mobs, and for those who like to take on intellectual challenges, there are plenty of maze maps for you to challenge. Make your own map[] Various types of maps can be made in Minecraft, including challenge maps, parkour maps, and survival maps, and there are endless ways to build these. Some ideas would include using command blocks or redstone circuits to make a decryption or puzzle map, or using blocks to make a parkour or island map. Sky castles are also great. You can also do pvp maps and play with your friends. Upload videos[] With software (such as OBS) that allows you to record your screen, videos can be made of Minecraft gameplay. Some common categories of Minecraft videos are Survival Let's Plays, playing custom maps, and building tutorials. These videos can be put up on any website that allows for video uploading; YouTube is the most common of these, but there are alternatives available. Use/create a resource pack[] Changing the resource pack won't provide new blocks or items, but it will give Minecraft a fresh look that can be exciting when the first world is created, so you can pick one on the Web and have a look at Minecraft with a new eye. You can also make your very own resource pack and replace some textures, sounds, subtitles, etc. with yours! Try mods[] Try mods! Some large ones take time to be fully explored. There are many Minecraft mods. Try them out slowly. See Curse Forge and Minecraft Forums for details. Try Unmanned mining[] Install a computer mod (ComputerCraft mod), create "mining turtles" or "advanced" mining turtles, use the built-in mining program (tunnel length). Turtles need fuel, if it can't move, fill in the inventory with coal or other kinds of fuel, type in "refill all" to supplement the fuel. This will make you more secure because they're diamond pickaxes with infinite durability, can instantly dig, and are not afraid of lava or monsters. However, it can't be equipped with an enchanted pickaxe. Make mods[] Sometimes it's difficult to make a mod (for some people or some types of mod), but you can make the game the way you want it to be, such as a new dimension, some new blocks, and mobs. If you can't program, you can also try to use some visual tools (e.g. MCreator). Others[] Play other games- Sure, you can go do something active, and be sure to play video games other than Minecraft!
